BLUELINK / BRAND ASSETS

Brand Identity & Governance

Corporate artwork. Clear usage. Traceable releases.

BlueLink Blockchain Services

Final edition / v1.0.0 / 20 October 2026

bluelinkos.com

CORPORATE RASTER + DOCUMENTATION

01 / BRAND SYSTEM

One identity. Clear standards.

A final, versioned reference for BlueLink corporate artwork, public brand usage and the way the library is maintained.

In this handbook	Page
Company identity and public copy	3
Corporate artwork and logo placement	4-5
Color, accessibility and typography	6-8
File inventory and derivative quality	9
Usage, rights and intellectual property	10-11
Product identity and BLT references	12
Authorization, control and integrity	13-14
GitHub publication and sources	15-16

Release scope

Version 1.0.0 contains **three unique original corporate raster assets**, **eight derived PNG exports**, the full Markdown policy set, design tokens, this handbook and operational templates.

The duplicate transparent upload is recorded as provenance, not a second visual variant. Native SVG, a text wordmark, monochrome artwork and separately designated product logos are outside this release.

> **Final documents are included. A GitHub publication event is separate and occurs when the authorized maintainer publishes the release.**

Detailed Markdown files are the controlled policy reference. This handbook is their illustrated companion. Issue date: 20 October 2026.

02 / BRAND SYSTEM

The BlueLink identity

BlueLink Blockchain Services focuses on tokenized real-world assets and digital markets.

Public company description

BlueLink Blockchain Services is the organization behind BlueLink, a blockchain and digital-asset brand focused on tokenized real-world assets and digital markets. The brand library provides corporate artwork and identity standards for consistent public representation.

Write the name correctly

Context	Use
Corporate brand	BlueLink
Organization name	BlueLink Blockchain Services
Product at first mention	BlueLink Token (BLT)
Website	bluelinkos.com
Brand/documentation contact	ai@bluelinkos.com

Voice and evidence

Use direct language and verifiable descriptions. Explain the subject before using abbreviations. Do not add guaranteed outcomes, banking or regulatory claims, registration status, unverified partners or a product catalog inferred from the domain name.

The website title supports the positioning above. The company supplied its organization name, GitHub references and contact information. Full website styles and legal records were not retrievable in this build; the source register preserves those boundaries.

References: S01 and C01. Controlled copy: documents/COMPANY-OVERVIEW.md and media-kit/BOILERPLATE.md.

03 / BRAND SYSTEM

Corporate artwork

Preserve the supplied artwork. Choose the version that fits the background and the purpose.

Supplied light presentation	Supplied dark presentation
1024 x 1024 px JPEG Opaque light background	1024 x 1024 px JPEG Opaque dark background

Transparent corporate mark

The native transparent PNG has a **358 x 358 px** canvas. Use it only when its complete gradient remains readable against the actual background. It is not a separately supplied token icon.

The light and dark JPGs are independent supplied renderings. Do not assume that they are a geometrically identical recolor pair or rebuild one from the other.

> **No native vector master or reversed-white mark is included. A large raster export does not become an original vector or high-detail master.**

Files: logos/primary/ and logos/transparent/. Source IDs: BL-CORP-007, BL-CORP-008 and BL-CORP-012.

04 / BRAND SYSTEM

Space, scale and placement

The monogram needs room to remain recognizable. Measure the visible mark, not just the square canvas.

H / 8 clear space

H = visible mark height

160 px mark = 20 px space

64 CSS px minimum visible

height for normal identity use

Diagram: source canvas retained.
Dashed line is a layout guide,
not part of the artwork.

Rule	Specification
Clear space	At least H/8 on every side of the visible mark. Retain the source canvas and add layout margin when needed.
Ordinary digital use	At least 64 CSS px of visible mark height. Inspect compact icons at their real display size.
Ordinary print use	At least 20 mm visible height, with an actual-size proof. Large or high-resolution work requires a suitable native master.

The transparent image contains a 295 x 320 px nonzero-alpha bounding box on its 358 px square canvas. Its 320 px visible height supports about 27 mm at 300 pixels per inch without enlargement.

Do not stretch, crop, rotate, recolor, redraw or add effects. Do not merge the mark with another identity without specific authorization.

Specification and measurements: brand-guidelines/LOGO-SPECIFICATIONS.md; source C02 and calculation M01.

05 / BRAND SYSTEM

Color with a defined role

A documentation palette derived from the supplied raster artwork. The original logo gradients remain unchanged.

Monogram Navy `#11203F / 17, 32, 63`	Headings and body text
Core Blue `#155BBC / 21, 91, 188`	Primary accent and links
Sky Blue `#3D90F0 / 61, 144, 240`	Highlight on dark surfaces
Bright Highlight `#4497F2 / 68, 151, 242`	Decorative accent
Dark Surface `#11131F / 17, 19, 31`	Dark presentation background
Source Light `#FEFEFE / 254, 254, 254`	Supplied JPG background reference
White `#FFFFFF / 255, 255, 255`	Digital document surface

Color samples use documented pixel regions from the supplied images. White is an additional documentation neutral. These values are not recovered website CSS or original vector gradient stops.

Do not use flat-color tokens to repaint the logo. Pantone, CMYK and manufacturing equivalents are not specified by this edition.

Machine-readable references: brand-guidelines/DESIGN-TOKENS.json, brand-guidelines/brand.css and metadata/color-samples.json.

06 / BRAND SYSTEM

Readable by design

Use color to clarify hierarchy without sacrificing legibility. Test the actual foreground and background.

Text/background pair	Ratio	Ordinary text
Navy / white	16.13:1	Pass
Core blue / white	6.45:1	Pass
Sky blue / white	3.26:1	Fail
Bright highlight / white	3.02:1	Fail
Sky blue / dark surface	5.67:1	Pass
White / core blue	6.45:1	Pass

Apply the threshold correctly

WCAG specifies **4.5:1** for ordinary text and **3:1** for large text. Its large-text definition generally means at least 18 point regular or 14 point bold. Ratios above are rounded for display; decisions use unrounded calculations. [S08]

Meaningful interface components and graphics have their own applicable 3:1 non-text criterion and exceptions. A flat-color contrast pass does not certify an entire screen or document. [S09]

Beyond contrast

Keep links distinguishable without color alone, allow content to reflow and zoom, and use meaningful alternative text. For a corporate image use "BlueLink corporate logo"; for a linked home-navigation image, "BlueLink home" describes the destination.

The logo-specific contrast exception does not remove the need for readable content around it. Avoid backgrounds that make part of the gradient monogram disappear.

References: W3C S08-S09. Full calculations: metadata/color-samples.json.

07 / BRAND SYSTEM

Practical typography

System fonts support clear documentation without placing font software in the brand repository.

Role	Size / weight	Line height
Page title	36 px / 700	1.15
Major section	28 px / 700	1.25
Subsection	20 px / 600	1.35
Body	16 px / 400	1.60
Caption	14 px / 400	1.45
Code	14 px / 400	1.50

Sans-serif stack

```
system-ui, -apple-system, BlinkMacSystemFont,
"Segoe UI", sans-serif
```

Monospace stack

```
ui-monospace, SFMono-Regular, Consolas,
"Liberation Mono", monospace
```

Keep paragraph lengths readable, normally about 45-80 characters. Use sentence case and hierarchy through size, weight and whitespace. Preserve the exact case and characters in filenames and hashes.

The logo is artwork, not a text font. Do not reconstruct the monogram by typing initials or treat ordinary product text as an official graphical lockup.

> **These are v1.0.0 documentation standards, not a claim about the current website font. No font binaries are included.**

Controlled standard: brand-guidelines/TYPOGRAPHY.md. The handbook uses neutral document-production typography for consistent rendering.

08 / BRAND SYSTEM

Know the source you are using

Eleven image files are distributed. Original artwork and convenience derivatives remain clearly distinguished.

Group	Files / native canvas	Treatment
Original presentations	2 JPEGs / 1024 px square	Unchanged source bytes
Original transparent mark	1 PNG / 358 px square	Canonical transparent asset
Compact icons	32, 64, 128 and 256 px PNGs	Downsampled derivatives
Large icons	512 and 1024 px PNGs	Upscaled from 358 px source
Background composites	2 PNGs / 1024 px square	Upscaled derivatives

No duplicate variant

The uploaded files logo.png and logo - Copy.png were byte-identical. Their common source hash and original names are retained in metadata/source-uploads.json; only the canonical transparent file is distributed.

No hidden quality claim

A 1024 px derivative does not contain more original detail than its 358 px source. The independent 1024 px JPG presentations are not evidence that a 1024 px transparent master exists.

Integrity records

ASSET-MANIFEST.md is the readable index. metadata/asset-manifest.json records IDs, paths, format, dimensions, alpha presence, bytes, hashes and derivation. The companion checksum files allow offline verification.

No native SVG, standalone wordmark, monochrome master or separately designated product artwork is included in v1.0.0.

Asset IDs are retained from the preceding inventory; removing the duplicate does not renumber remaining assets.

09 / BRAND SYSTEM

Brand use and permissions

Public availability makes the files discoverable. It is not an unrestricted commercial trademark license.

Use	Treatment
Company-managed communications	Use the released artwork and applicable internal authority.
Partner promotion or merchandise	Obtain written authorization unless an existing agreement or applicable law already permits the use.
Press, education and factual reference	Identify accurately; do not imply sponsorship. Applicable legal exceptions remain unaffected.
Modification or new product lockup	Require a specific decision; access to the files is not that decision.

Protect the meaning of the identity

A logo is not an audit badge, wallet-verification mechanism, partner certificate or endorsement. Do not register or present a third-party channel as an official BlueLink service.

Rights notice

The repository notice preserves applicable legal exceptions, existing written permissions and GitHub platform rights. Public repositories may be viewed and forked under the applicable GitHub terms. [S03-S04]

No SolidProof logo, third-party audit report or font software is licensed or redistributed by this package. Third-party assets retain their own terms.

Controlled documents: BRAND-USAGE.md, LICENSE.md and documents/TRADEMARK-POLICY.md. Inquiries: ai@bluelinkos.com.

10 / BRAND SYSTEM

IP records, without confusion

Keep the public statement clear and the underlying legal records in the right place.

Public library	Restricted corporate records
Asset names, versions, hashes and provenance	Creator agreements, assignments and source permissions
Brand-use policy and custodianship notice	Signed authorizations and confidential commercial terms
Accurate public registration references, when supported	Personal data, identity documents and legal correspondence

What the public notice says

BlueLink Blockchain Services maintains this repository for the distributed BlueLink brand materials. Rights remain subject to the applicable lawful ownership, licenses and agreements. File availability is not a transfer of title or a blanket commercial logo license.

What it does not claim

This publication is not an ownership certificate, signed assignment, registration record or legal opinion. It does not invent a legal entity suffix, jurisdiction, registration number, signature or creator identity.

Domain and evidence

Use bluelinkos.com for current brand communications. Changing a domain reference does not itself establish trademark rights or transfer copyright. File possession and copyright ownership are distinct legal concepts. [S06-S07]

The US sources provide legal background, not a title investigation or a decision about which jurisdiction governs every BlueLink asset.

Controlled files: INTELLECTUAL-PROPERTY.md and documents/IP-OWNERSHIP-STATEMENT.md. Rights questions should be handled with the relevant holder and qualified legal advice.

11 / BRAND SYSTEM

Product identity: BLT

Separate corporate identity, product naming, source-code releases and audit scope.

Identity	v1.0.0 treatment
BlueLink / BlueLink Blockchain Services	Corporate monogram and documentation
BlueLink Token (BLT)	Text identity and source references; no separate token-logo artwork

Company-provided contract reference

Repository: github.com/bluelink-os/BLT_Smart-Contract
Contract tag: v1.0.0

`af4bdec55c48775754931efb4019b6d12b58484a`

This is the supplied contract commit, not the brand repository commit. Live tag alignment, deployed-source equivalence and audit-to-commit matching were not established by this documentation build.

Audit wording

A BlueLink smart-contract assessment is available from SolidProof. Consult it for the actual files, hashes, findings and exclusions. It does not establish that every related contract, later commit or product is covered, and the provider disclaims endorsement and security guarantees. [S02]

Product registration

Do not infer a released operating-system product from the domain name or populate the asset registry with historical roadmap items. Register new artwork with source, rights evidence, product relationship and a real decision record.

Controlled files: documents/PRODUCT-BRANDING.md, BLT-BRAND-GUIDELINES.md and ECOSYSTEM-ASSET-REGISTRY.md.

12 / BRAND SYSTEM

A clear route to authorization

Request, decide, document and publish. Keep authority and routine file maintenance separate.

Stage	Required action
1 / Request	Identify the asset, version, intended use, audience, channels, dates, changes and a preview.
2 / Assess	Check source rights, visual treatment, product identity and relevant third-party terms.
3 / Decide	Record the actual authorized representative, scope, conditions and real decision date.
4 / Publish	Check the final execution, retain private permissions and release only the permitted files.

Working contact

Send brand-use requests and documentation inquiries to **ai@bluelinkos.com**, the contact supplied by the company. Delivery and monitoring were not tested as part of the build; no response-time commitment is stated.

Template versus record

The blank request, asset-decision and product-registration forms are finished operational templates. They do not become evidence of approval until the responsible person completes a genuine record. No signatures or decisions are prefilled.

Contributions and sensitive reports

Use a pull request for nonsensitive corrections. Keep private agreements, credentials and rights disputes out of public issues. Follow SECURITY.md for confidential integrity concerns; the policy does not create a bounty or legal-immunity promise.

Controlled process: documents/BRAND-AUTHORIZATION.md, governance/ASSET-APPROVAL-POLICY.md and CONTRIBUTING.md.

13 / BRAND SYSTEM

Maintain a reliable record

Treat the release as a controlled collection: source artwork, documents, metadata and publication history.

Responsibility	Focus
Brand authority	Identity, naming, standards and exceptions
Rights reviewer	Permissions and supporting legal evidence
Product representative	Product identity and technical reference accuracy
Maintainer / publisher	Validation, packaging and the actual release event

One authorized person may hold several roles. Do not assume that a contributor or routine maintainer has authority to grant a trademark license.

Finality and distribution

This package is final. A file can be finalized before it is published. Future work moves through working, review and final states; the actual distribution event is recorded separately. The brand tag must identify the real brand-source commit.

Offline verification

```
python tools/verify_assets.py
python tools/verify_repository.py
```

Both scripts are read-only and require no network or third-party packages. The first checks the 11 image files. The second checks the listed packaged repository files. Obtain the checksum inventory from a trusted source; a matching hash alone does not authenticate its publisher.

Version changes

Use a major version for a materially changed identity or incompatible rights framework; a minor version for compatible additions; a patch for nonmaterial corrections. Keep superseded releases traceable rather than silently replacing their contents.

Controlled files: governance/DOCUMENT-CONTROL.md, governance/RELEASE-POLICY.md and metadata/document-register.json.

14 / BRAND SYSTEM

Publish to the right repository

The local documents are finished. The GitHub upload and release are performed from your authorized company account.

Step	Action
01	Extract this package and place its contents in the brand repository, including the hidden Git configuration files.
02	Inspect the remote and staged files; run both integrity checks. Do not work from the BLT contract repository.
03	Commit and push the intended source without overwriting remote history. Check that the intended version tag is unused.
04	Create the tag for the actual brand commit. Use the finalized RELEASE-NOTES.md and attach the intended files.
05	Publish, then test the rendered README, download bytes and tag-to-commit relationship.

Repository and release identity

Repository name: bluelink-brand-assets
Organization: bluelink-os
Release title: BlueLink Official Brand Assets - v1.0.0

A GitHub release records its publication timestamp and associated tag. Do not invent those values in advance or use the separate contract commit as the brand commit.

Protect released files

Ordinary tags are not inherently immutable. When GitHub immutable releases are enabled, attach intended files before publishing; the associated tag and assets are then protected. No setting has been changed by this package. [S10-S12]

Detailed, conditional commands: PUBLISHING.md. Repeatable operator checklist: governance/PUBLICATION-CHECKLIST.md. No remote publication is performed by the package itself.

15 / BRAND SYSTEM

Sources and official references

Evidence is kept explicit without turning this final edition into an ownership certificate or a website reconstruction.

Source	Primary reference
S01	BlueLink website
S02	SolidProof BlueLink assessment
S03-S04	GitHub licensing and platform terms
S05-S06	USPTO trademark and domain distinctions
S07	U.S. Copyright Office: ownership and transfer
S08	W3C: text contrast
S09	W3C: non-text contrast
S10-S12	GitHub repository rules and release handling
S13	Git command reference

All public references were checked on 20 October 2026. Full URLs, per-source scope and company-provided evidence are recorded in governance/SOURCES.md. The website title was retrieved; full site styling and live GitHub release alignment were not established.

The SolidProof profile still points to the older bluelinkblockchain.com domain. The domain register records that external discrepancy; this package does not claim the third-party profile has been updated.

Current company website: bluelinkos.com
Brand and documentation inquiries: ai@bluelinkos.com

BlueLink Blockchain Services | Brand Assets v1.0.0 | Final edition
Detailed Markdown policies control; this handbook is the illustrated companion.
